

Iowa High School Four-Year Graduation Rates

The Iowa Department of Education collects and reports on the number of students that graduate from public schools each year. Because of timing issues in the data collections and methodology, graduation rates aren't determined until about a year after the graduations occur. The formula for calculating a four-year cohort graduation rate for the class of 2019 is as follows:

- **(FG + TIG)/F + TI – TO) where:**
- FG = First-Time 9th grade students in the fall of 2015 and graduated in 2019 or before
- TIG = Students who transferred into the cohort in grades 9 to 12 and graduate in 2019 or before
- F = First-time 9th grade student in fall of 2015.
- TI = Transferred into the first-time 9th graders' cohort in grades 9 to 12. TO = Transfer out (including deceased)

The following map provides the four-year graduation rates for the class of 2019 by school district. The state average rate was 91.6% while the median rate was 95.9%. For more information:
